There is unfortunately a limit to the time and to the efforts we can put in this solution manual and studying Bayesian Essentials with R does require some prerequisites in maths (such as matrix algebra and Riemann integrals), and in probability theory (such as the use of joint and conditional densities), as well as some bases of statistics (such as the notions of inference, sufficiency, and confidence sets) that we cannot usefully summarise here.

We provide an introductory tutorial in using Approximate Bayesian Computation in R. • We investigate specific ABC choices required to tune the algorithm. • Three case studies of ABC applied to infectious disease models are presented. • The summary statistic and model must be chosen to align with the data available. •

No one in the 'real' world uses R, only mathematics departments, so you want be applying these functions in work related environments. No answers given to chapter questions. The book is called 'Bayesian computation in R', only if you understand Bayesian computation very well and need to see some examples in R. Otherwise your not going to learn Bayesian stats with this book.
