One piece of evidence offered by Darwin is found in the science of paleontology. Paleontology deals with locating, cataloging, and interpreting the life forms that existed in past millennia. It is the study of fossils—the bones, shells, teeth, and other remains of organisms, or evidence of ancient organisms, that have survived over eons of time. Paleontology supports the theory of evolution because it shows a descent of modern organisms from common ancestors.

Biology Study Guides - SparkNotes

Theory of Evolution. In his book The Origin of Species, Darwin presented evidence for his "descent with modification" theory, which has come down to us as the theory of evolution, although Darwin avoided the term "evolution.". Essentially, Darwin suggested that random variations take place in living things and that the environment selects those individuals better able to survive and reproduce.

Theory of Evolution - CliffsNotes Study Guides

Evolution, as understood by biologists, is the change through time that occurs in populations of organisms in response to changing environments. The changes, coded in the molecules of DNA, are transmitted from generation to generation and over the history of the Earth have resulted in progressively more complex life forms. The name of Charles Darwin and his theory of natural selection are inexorably attached to evolution and, together with the mechanisms of genetics, form the basis of the ...
