So C/C++ code can call FORTRAN code (F77-like) and exchange data via global C structs. In my mind, the "convert" aspect will be mainly to "clean up" FORTRAN code to make use of standard C interoperability facilities. Here's a simple example, here the Fortran code is in modern free-form style, but the same would work with fixed-form too:

ANSWER: I do not know of any commercial program that will translate FORTRAN to C, but I've never searched for one either. From past experience, I know that FORTRAN is fairly easy to parse using PERL. If you know PERL, it is probably possible to write a PERL program to do the translation but it would be a big job.
