In this video we will demonstrate practical CNC wood joinery (practical meaning that there will be no need for special jigs). The material will be 3/4" sheet stock and the parts will be milled using a 3 axis CNC machine (Our greenBull). We will start with a simple joint, a finger joint. This joint - as it's name implies - is a joint that exhibits protrusions that measure the thickness of the wood, so that when put together, the corner is flush.

We start out with four inch pieces of wood, just like last time, but in a flat arrangement. First we make the design a bit longer (offset by four) so it looks like a frame, and mirrored at a right angle. For a more complex type of joint, we just want to take a line and move it around and meet back at the other corner.
