Scientists attribute the global warming trend observed since the mid-20th

Online Library Global Climate Change And Human Health From Science To Practice

century to the human expansion of the "greenhouse effect"¹ — warming that results when the atmosphere traps heat radiating from Earth toward space. Certain gases in the atmosphere block heat from escaping.

Causes | Facts - Climate Change: Vital Signs of the Planet

Online Library Global Climate Change And Human Health From Science To Practice

Natural changes in the Sun and Earth cannot explain today's global warming. Human activities are causing Earth to heat up in ways that are different from warm periods in the past. Earth is getting hotter. Since 1900, the average surface air temperature has risen 1.8 degrees Fahrenheit (1 degree Celsius).
