Here's how your body might change after a year of eternal beauty sleep. A different kind of brain drain. Shutterstock. Death waits for no one, and it certainly won't wait for a corpse to get gussied up before your body starts to break down. The first organ to go is your brain. After spending its whole life trying to keep the rest of you alive ...

What happens to your body after one year in a coffin

According to Dr. Arpad A. Vass, a Senior Staff Scientist at Oak Ridge National Laboratory and Adjunct Associate Professor at the University of Tennessee in Forensic Anthropology, human decomposition begins around four minutes after a person dies and follows four stages: autolysis, bloat, active decay, and skeletonization.

The Stages Of Human Decomposition | Aftermath Services ...

In general structure, the human body follows a plan that can be described as a cylinder enclosing two tubes and a rod. This body plan is most clearly evident in the embryo; by birth, the plan is apparent only in the trunk region—i.e., in the thorax and abdomen. The body wall forms the cylinder. The two tubes are the ventrally located alimentary canal (i.e., the digestive tract) and the dorsally located neural tube (i.e., the spinal cord).
