CAMERA EXPOSURE A photograph's exposure determines how light or dark an image will appear when it's been captured by your camera. Believe it or not, this is determined by just three camera settings: aperture, ISO and shutter speed (the "exposure triangle"). Mastering their use is an essential part of developing an intuition for photography.

Camera Exposure: Aperture, ISO & Shutter Speed

When you adjust one of the settings, say, increase the shutter speed a step (less light) if you were to then widen the aperture a stop (more light) the images will have an identical exposure. The images wouldn't necessarily be identical though, adjusting the shutter speed or aperture affects other aspects of the image as well – such as a smaller depth of field, due to the increased aperture.
