Based on these observations, Mendel formulated his first law of inheritance. This law is called the law of segregation. It states that there are two factors controlling a given characteristic, one of which dominates the other, and these factors separate and go to different gametes when a parent reproduces.

### **Chapter 7: Genetics Lesson 7.2: Gregor Mendel and Genetics**

According to Mendel, each organism that reproduces sexually by producing gametes has 2 factors (genes) for a characteristic. Of these, one is inherited from the male parent and other from the female parent. These are alleles for a characteristic. If the alleles are similar, they are in homozygous condition.
