## **Ophthalmic Pathology**

A total of 8 patients (8 eyes) diagnosed with ocular dirofilariasis were included in this study. All cases were clinically examined (including slit-lamp and fundus examination) by a uveitis expert. All cases were positively identified via microbiological and/or histopathological studies of the parasite, by both a veterinarian and a pathologist.

Ocular complications of hematologic malignancies such as leukemia are well documented. It is estimated that 50% or more of all leukemias manifest some form of ocular involvement [1, 2]. Here we present the cases of two patients with relatively rare hematologic malignancies with notable pre- or post-mortem demonstrating clinical and pathological ocular involvement.
