During a collision, an object always encounters an impulse and a change in momentum. During a collision, the impulse which an object experiences is equal to its velocity change. The velocity change of two respective objects involved in a collision will always be equal.

Momentum and Collisions Review - Printable Version

Before the collision, the two momentum values can be added: $30 \text{ units} + 0 = 30 \text{ units}$. (An object at rest has zero momentum.) After the collision, the momentum vectors can be added: $30 \text{ units} + 0 = 30 \text{ units}$. In each case, the total momentum is in the direction of the arrows.

Momentum and Collisions Review - with Answers #3 - Physics

In any collision or explosion involving two objects, the momentum change for each object is the same. So both the bullet and the gun encounter the same momentum change. The momentum change is simply the mass multiplied by the velocity change.
