With advancing technology have come newer methods to improve accuracy of localization for the performance of chemodenervation and neurolysis such as electromyographic guidance, electrical stimulation, and ultrasound guidance.

### Chemodenervation and nerve blocks in the diagnosis and ...

Neurolysis is the application of physical or chemical agents to a nerve in order to cause a temporary degeneration of targeted nerve fibers. When the nerve fibers degenerate, it causes an interruption in the transmission of nerve signals. In the medical field, this is most commonly and advantageously used to alleviate pain in cancer patients. The different types of neurolysis include celiac plexus neurolysis, endoscopic ultrasound guided neurolysis, and lumbar sympathetic neurolysis. Chemodenerv

### Neurolysis - Wikipedia

Introduction. Coeliac plexus neurolysis (CPN) was first reported in 1914.1-3 Traditional percutaneous CPN under CT or fluoroscopy guidance has been an effective approach to intractable pain due to upper abdominal cancer.1-3 Endoscopic ultrasound-guided coeliac plexus neurolysis (EUS-CPN) was first reported in 1996.2 4 5 Since then, it has become more widely used due to its superiority over ...

### Percutaneous retrocrural versus ultrasound-guided coeliac ...

Endoscopic ultrasound-guided neurolysis Endoscopic ultrasound (EUS)-guided neurolysis is a technique that performs neurolysis using a linear-array echoendoscope. [4] The EUS technique is minimally invasive and is believed to be safer than the traditional percutaneous approaches.

### Neurolysis - WikiMili, The Free Encyclopedia

The addition of ultrasound to e-stim guided phenol neurolysis was associated with lower doses of phenol when compared to e-stim guidance alone (2.31 mL vs 3.69 mL, p<.001). With subsequent injections, the dose of phenol increased with e-stim guidance (p<.001), but not with e-stim and ultrasound guidance (p=.95).

### Comparing electrical stimulation with and without ...

Endoscopic ultrasound-guided celiac plexus neurolysis (EUS-CPN) is widely used for reducing pain originating from upper abdominal organs. It is mainly indicated to treat pancreatic cancer pain, but also to relieve pain as a result of chronic pancreatitis.
